

Third Party

The new international standard ISO 20121: Event Sustainability Management Systems offers a credible framework to manage sustainability, ensuring continual improvement, and providing verifiable recognition of sustainability outcomes and performance claims.

Who's it For?

Third party conformity assessment is suitable for large events, event organisers, venues, those with major public stakeholders or major public funding. Third conformity allows you to be audited by an accredited certification body.

Who Conducts the Audit?

The audit will be conducted by an audit team, including an ISO Auditor from a leading Certifying Body and an Event Sustainability Specialist from GreenShoot Pacific. You can be assured your audit team has the breadth of sector experience and auditing rigour required for a robust and comprehensive audit.

Our sector specialists are all Sustainable Event Alliance Accredited Professionals. They have experience in implementing ISO 20121, and have been trained in audit process and the requirements of the standard. They have successfully completed competency assessments in event sustainability subject knowledge, management system implementation and audit process, under the direction of an accredited third party lead auditor.

Third Party Conformity Assessment

To streamline the process and add maximum benefit to the client we use the [SEMS Tool](#) to support the audit process. All evidence is held within the tool ensuring the steps to third party conformity assessment are as simple as possible. The auditor will use the built-in audit function of the tool review the evidence and map it back to the requirements of the standard. Third Party Conformity Assessment requires this documentation review, interviews with key staff and stakeholders and an observation audit at a live event.

About the SEMS Tool

The [SEMS Tool](#) will guide you through the process of creating a management system and also works a diagnostic tool for issues identification, along with calculators for performance measurement. Upload your evidence, results, documentation and description of what issues you have and how you have managed them.

Of utmost importance, and what auditors will look for, is the documented evidence as per requirements of the standard. The [SEMS Tool](#) offers template examples of all the required documentation from which you can base your own documented procedures and processes.

Cost

The cost of the SEMS Tool is **US\$350** for an annual license.

Third Party conformity assessment is from **AU\$3200**. A quote will be prepared and final cost is based on the scale and complexity of your organization's event activities and the likely number of audit days.
